Our Statement

We at HEBET believe in the power of digital transformation to drive operational efficiency and increase competitive advantage for our clients across different sectors.

For over ten years, we have worked with our clients to enable them to fully leverage the power of technology through helping them to align business processes, information systems and technologies in order to ensure that investment in enterprise technologies align and contribute to their organization's vision, mission and priorities.

We take pride in contributing to the growth of the organizations we work with through supporting their journey to achieving true digital transformation and are destined to continue to do so to the best of our capacity

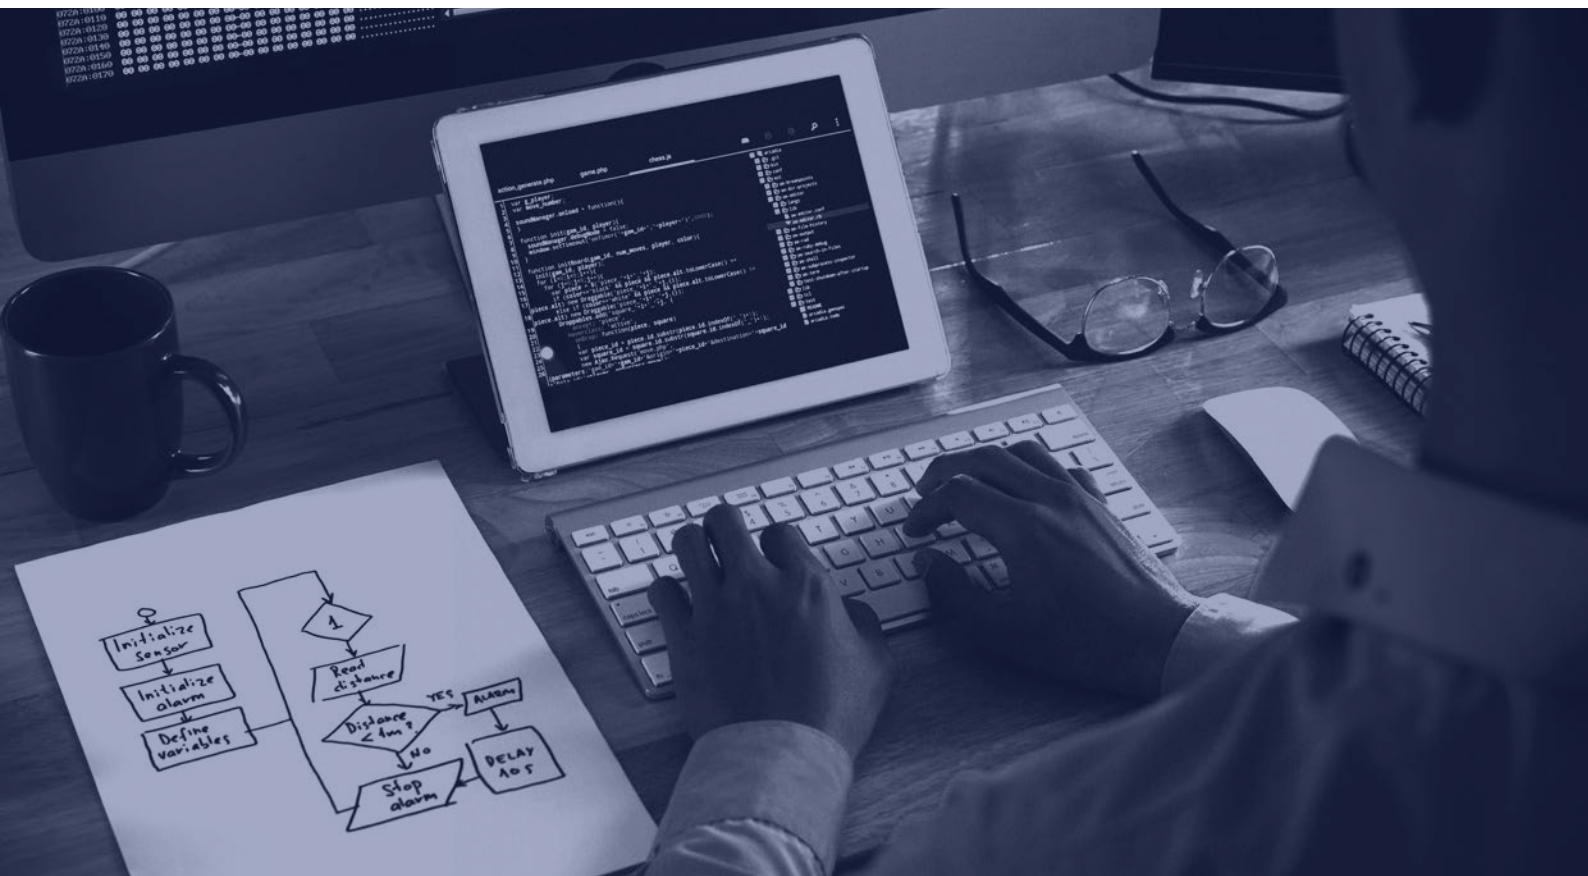

Get to Know us

About HEBET

HEBET Technologies Ltd was established in 2002 with the aim of providing affordable state-of-the-art digital solutions to our esteemed clients. We provide consultancy services that range from data management services, business process engineering, enterprise architecture, software requirement gathering, software development and project management. We pride ourselves in finding solutions to problems that others believe can't be solved using our experts with experience to work with both local and international organizations. HEBET Technologies aspires to be a dependable partner with our clients to find a customized

solution that goes beyond current client's needs. We perform a critical "knowledge broker" function for our clients, bringing them insights and solutions based on our wealth of knowledge of best practices, our experiences, and our expertise, and also utilizing intellectual assets of our partners.

HEBET Technologies was formed by digital transformation experts who are experienced in the field and who have been engaged in various ways to successfully execute projects within the private sector, NGO and government across Africa.

Our Vision, Mission & Philosophy

Vision

Our Vision is provide affordable state-of-the-art technologies to our esteemed customers. Through wide range of methodologies, project management techniques and a competent staff, we will provide insights and deliver solutions to match customer needs. We listen to our customers and we deliver what we promise.

Mission

To provide the most trusted digital technology solutions, focused on delivering unmatched client success.

Philosophy

We support our clients go through digital transformation by partnering with them to design and implement digital solutions that improve efficiency, increase performance, and achieve success.

Products and Services

We are a digital transformation service provision firm dedicated to providing the best digital solutions to our esteemed clients.

We provide end to end services and support to businesses of all sizes to support them to achieve their digital transformation. No matter how small or large your needs may be, we can help. We offer technology-related services ranging from developing digital transformation strategy to developing enterprise architecture, from designing an enterprise level software to designing branded customized hardware devices for corporate use.

We will work with you to provide a solution custom tailored to your needs. Our staff stays up to date with the latest news in the technology field, periodically receiving training to maintain industry standard certifications.

Custom Software & Mobile App Development

Custom development helps enterprise businesses stay competitive through modern platforms and digital apps that are useful and useable. Whether you want to delight customers with a robust and intuitive web experience, transfer your workflow to a mobile platform, or automate a manual process, our custom development services keep your future, and the needs of your staff and customers, in mind. The key is to start with understanding your business needs, then build clean, well-tested code that uses the latest generation of browsers and platforms. We do that. You also need secure, scalable, and maintainable solutions that meet demands for volume and maximum processing. We do that too, both on premises or in the cloud. Using technology platforms, frameworks, protocols and best practices, our broad expertise means your software will be tailored to your exact needs.

Project Management

Complex digital projects call on multiple teams, from strategy and design to development and QA, to successfully work together to deliver results that are on time, on budget, and aligned with business goals. Our project management team is well-versed in every aspect of digital and traditional project management. We become an extension of your team, collaborating with you to understand your goals, manage strategic initiatives, and accelerate the delivery of important projects. Our comprehensive approach is proven to lead to more successful project delivery and better position you in today's competitive market.

Web hosting

For the progress of any company or any business, it is very essential that it has some powerful online presence. HEBET Technologies always focus on supplying the web hosting service which is synchronized with your brand or company's objective. Every product will be expressed through the website and no matter what is your website's storage capacity, our great web servers will take care of it with the speedy network. We will provide you with the Anti-spam SMTP Proxy / Gateway (Deluxe), with advanced Web Control Panel (CPanel).

- ✓ An automated SSL certificate per domain

- ✓ Critical security updates
- ✓ DDoS prevention
- ✓ Web Application Firewall
- ✓ Global Content Delivery Network
- ✓ Anycast DNS
- ✓ Website Hardening

Customized and Branded Tablets

Insufficient ruggedness:

Consumer-grade tablets are often repackaged, placed within more rugged outer enclosures. While this improves the tablet's ability to withstand hazards such as drops, impacts, and liquids, they still often fall short of surviving in harsh environments such as exposure to caustic chemicals, extremely wide temperatures, or direct impacts to the display.

Feature mismatch

Consumer grade tablets often lack interfaces required for specific operations. Examples include wired Ethernet, barcode and/or fingerprint scanners.

Insufficient battery life

Most consumer-grade may not have enough battery to be able to be used in the field for a long time without the need for charge. This may hinder ability for extended use in the environments with limited access to power.

Over the past several years, the use of tablet technology has proliferated across industry and government. These portable platforms, with easily written custom application software, are suitable for many applications. We work with our clients to build branded tablets that incorporates your company branding and specification that responds to you need. Either battery life or ruggedness or additional options specifically to your needs. The following are some of the reasons our clients request for customized tablets:

Digital strategy and enterprise architecture development

We help to recognize and utilize full potential of IT solutions. By optimizing enterprise architecture framework, helping our clients in their digital transformation efforts from developing digital strategy to the development of roadmap, our task is to increase ROI metrics on existing digital investments or to help you to identify business needs and map them to digital requirements. Main focus of our services is convergence of digital and business goals, what is requirement for all further digital planning tasks.

When it's well formulated and implemented, digital strategic planning provides three important benefits.

1. It aligns technology with your business goals, enabling a contribution to your organisation's strategic objectives.
2. It enables digital systems to be fully integrated across each department, which in turn allows for organisation-wide management of your digital environment. The needs of your customers are fully considered and satisfied.
3. It builds a strong relationship between your business and ICT departments, which secures commitment to the digital strategy since all key stakeholders are involved in the process.

HEBET Technologies develops plans and roadmaps which give you the clarity you need to assist with strategic ICT decision making.
